## 1. Easter Egg

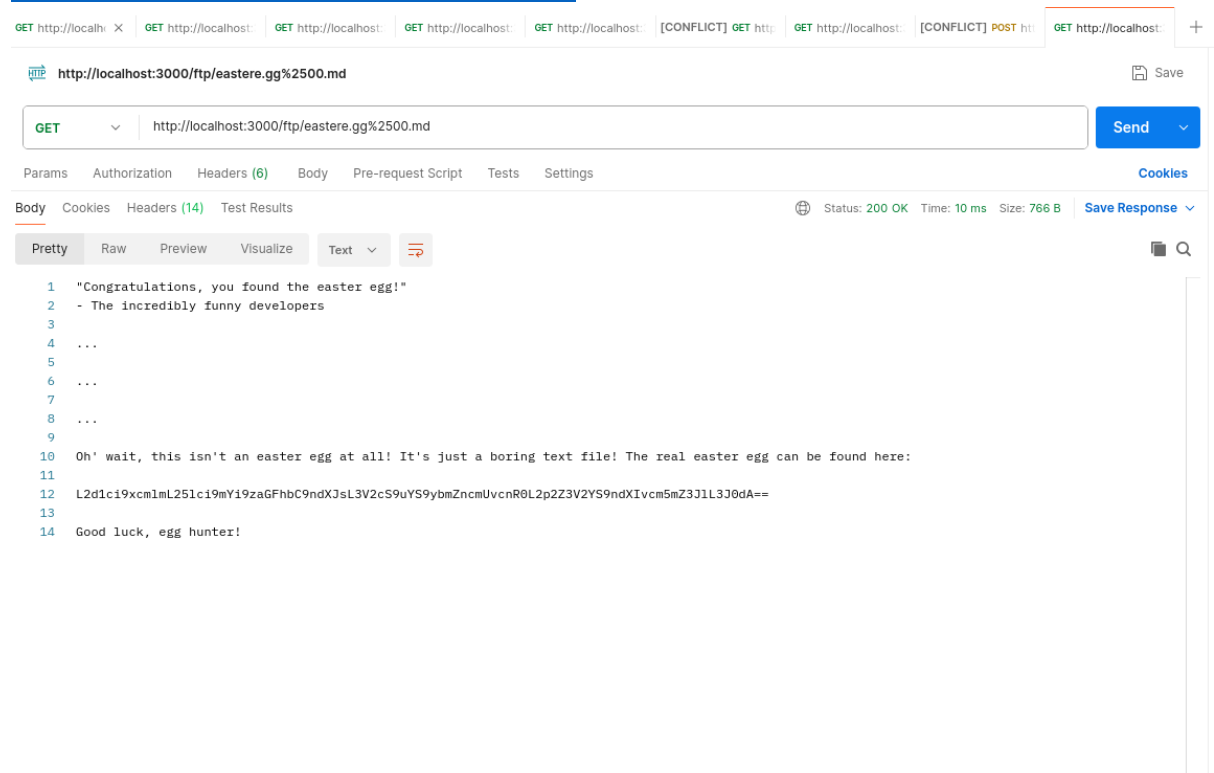

POC:

- Mengakses file eastere.gg pada <http://localhost:3000/ftp/eastere.gg>

- Gunakan teknik **Poison Null Byte** untuk menambahkan ekstensi .md pada file yang tidak berformat .md

<http://localhost:3000/ftp/eastere.gg%2500.md>

- Didapatkan kombinasi karakter **L2d1ci9xcmlmL251ci9mYi9zaGFhbc9ndXJsL3V2cS9uYS9ybmZncmUvcnR0L2p2Z3V2YS9ndXlvcn5mZ3JlL3J0dA==**, yang merupakan bentuk Base64, jika didecode, maka akan mendapatkan hasil seperti ini:

**/gur/qrif/ner/fb/shaal/gurl/uvq/na/rnfgre/rtt/jvguva/gur/rnfgre/rtt**

- Ketika ditanyakan ke Gemini, didapatkan bahwa hasil diatas merupakan bentuk enkripsi dari ROT-13 (Rotate by 13 places) yang menggunakan metode Caesar Cipher (menggeser alfabet ke kanan / kiri dengan angka tertentu)

what kind of encryption is this  
/gur/qrif/ner/fb/shaal/gurl/uvq/na/rnfgre/rtt/jvguva/gur/rnfgre/  
rtt

◆ This looks like **ROT13** encryption.

#### 🗨️ What is ROT13?

ROT13 (short for "rotate by 13 places") is a simple letter substitution cipher that replaces a letter with the 13th letter after it in the alphabet.

- **A becomes N, B becomes O**, and so on.
- The great thing about ROT13 is that applying it a second time reverts the text back to the original, because  $13 + 13 = 26$  (the number of letters in the alphabet).

#### 📄 Decrypted Text

If you apply ROT13 to your string:

/gur/qrif/ner/fb/shaal/gurl/uvq/na/rnfgre/rtt/jvguva/gur/rnfgre/rtt

The decrypted message is:

/the/devs/are/so/funny/they/hid/an/easter/egg/within/the/easter/egg

Would you like to try another short encoded message or learn about other simple ciphers like Caesar or Vigenère?

🔄 📄 ⋮

- Hasil dekripsi, kita mendapatkan value berupa **/the/devs/are/so/funny/they/hid/an/easter/egg/within/the/easter/egg**
- Akses ke <http://localhost:3000/the/devs/are/so/funny/they/hid/an/easter/egg/within/the/easter/egg>
